

# The most flexible, coordinated low voltage system is now communication-ready

Acti 9 combines instant, error-proof connectivity to give you the safest, simplest, most efficient installations

## Put five generations of experience to work in your panels

We leveraged five generations of low-voltage expertise to design a precise, high-quality modular system without compromise. Acti 9™ offers the fastest and most flexible installation experience, and completely eliminates safety concerns during maintenance and operation.

Acti 9 is high quality and engineered to adapt to the most challenging networks and environments while still remaining cost-effective over time. It is the most flexible, coordinated, comprehensive, and innovative range of low-voltage modular devices available.

## Revolutionize communication in your installations

In addition to the core protecting offer, the Acti 9 communication system uses Modbus protocol, provides real-time data from your panels and circuits. It allows load control and monitoring, and includes prefabricated wiring to give you instant, error-proof connectivity. Now you can monitor and control power on every floor, sector, office, and workshop.

Acti 9 Smartlink communication module

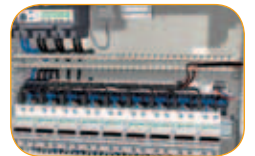

### Ready to be connected

Centralize control, collect energy meter data with just a simple communication module.

### Save 40% of your time

One-click, prefabricated wiring for communication between your distribution panel and any facility management system.

### Safe and reliable

Reliable, error-proof manufacturer-guaranteed connections. EMC tested for immunity, radiated, and conducted safety.

Discover how robust automation, control, and monitoring of energy usage can deliver up to 30% energy savings
